

## Oracle E-Business Suite Extensions for Oracle Endeca

Oracle E-Business Suite Extensions for Oracle Endeca are integrated applications that allow enterprises to exploit information-driven navigation to discover and act on their most important business challenges.

Oracle E-Business Suite Extensions for Oracle Endeca enable enterprises to optimize operational decisions and improve process efficiency with real-time access to operational data, driving better cost and revenue decisions.

### Key Features

- Key performance metrics
- Instant search results
- Search across organizations
- Search on attached documents
- Advanced visualization
- Guided Navigation®
- Range filters with histograms
- Tag clouds
- Charts
- Cross tab
- Fully integrated with Oracle E-Business Suite
- Available for both desktop and mobile devices

### See More – Discover Top Priorities Faster

ERP users have access to millions of transaction records and attached documents, yet they are unsure of what to work on next. While there are screens for entering and querying data, there is little to guide users to the most important business challenges facing them today. Users typically rely on IT-created reports or custom inquiry screens to identify operational problems and exceptions, such as stuck orders or delayed projects. Often, these reports reflect the prior day's data and fail to reveal root causes.

Oracle E-Business Suite Extensions for Oracle Endeca are a collection of applications aimed at solving the problem of what users should work on next. Leveraging Oracle Endeca Information Discovery technology, these applications provide an information-driven approach to navigation that helps users focus on the right information, at the right time, to make the right decisions.

Oracle E-Business Suite Extensions for Oracle Endeca extend the E-Business Suite applications with discovery-oriented dashboards that bring together diverse operational data from E-Business Suite. With tools and visualizations including faceted search, range filters, tag clouds, charts and key indicators, users can freely browse and drill on whatever engages their attention. With each drilldown or search refinement, the Endeca in-memory data engine re-calculates key indicators, tag clouds, charts and faceted search choices to provide the user with new information on which to base next discovery steps. Through this “conversation with the data”, users progressively narrow in on the most important issues to be addressed, all without predefined navigation paths, structured queries, or operational reports.

### Act Faster – Resolve Business Challenges

Having identified their most pressing business challenges, users seamlessly transition to detailed transaction screens to take immediate, informed action. Transaction screens are pre-populated with the results of information discovery, with no re-querying of data required. Users can switch between information discovery and transaction screens as they work their way through a set of identified problems, retaining the current discovery context. Since updates made in transaction screens are automatically reflected in refreshed key indicators, tag clouds, and charts, users can easily determine whether their actions have resolved pressing business challenges.

**Key Benefits:**

- See more and act faster
- Mobile access with great performance
- Experience quick user adoption and utilization
- Improve communication of data with support for a variety of visualizations and charts
- Fast deployment
- No change to Oracle E-Business Suite database
- Out-of-the-box UI and security integration
- Analysis on structured and unstructured information from Oracle E-Business Suite investments
- Flexibly meet new business requirements through configuration instead of custom coding

**Leverage Existing Oracle E-Business Suite Investment**

Enterprises can add Endeca-based discovery capabilities to Oracle E-Business Suite Release 12.1.3 or higher with minimal setup or effort, and minimal disruption to current operations. Using a simple all-in-one installer, enterprises can rapidly deploy Oracle E-Business Suite Extensions for Oracle Endeca, achieving seamless, out-of-the-box integration.

With rapid deployment, users can be up and running very quickly, analyzing current Oracle E-Business information on both mobile and desktop devices. The information, which is loaded and stored in a faceted in-memory data model, is dynamically refreshed with changes to underlying transactions and documents.

Unlike a traditional data warehouse, which may require replication of security setups from the transaction system, Oracle E-Business Suite Extensions for Oracle Endeca require no security setup or user provisioning. Oracle E-Business Suite Extensions automatically adhere to existing E-Business Suite security, so that the content a user sees is completely consistent with E-Business Suite context and security.

The available Oracle E-Business Suite Extensions for Oracle Endeca span the E-Business Suite product areas, including:

- Financials and Projects
- Procurement
- Supply Chain Management
- Asset Lifecycle and Service
- Human Capital Management.
